

C6

# C6

COMPOSITE JEWELRY DESIGN  
by Anne Cohen

**Duplicity in life. Black as coal and clear as light itself.**

### C6 Elemental

Ring in carbon with  
diamond (0,11 ct)

## Philosophy

C6 was established on a dream to combine the rawness of carbonfiber with the beauty of a diamond, to combine two materials which in their essence are the same, though different in structure, color and properties.

C6 is the basis for our living world. It is found in our planet, in humans and throughout the universe. Without C6 there would be no life. From stardust to life. Created by Supernovas stardust of C6 was spread into the universe and formed the planets and life on earth. Making jewelry founded on C6 atoms and

complimented by two very different materials, carbonfiber and diamonds, is for me a symbol of life. A journey from stardust to modern technology.

Its amazing to put these two materials together, it keeps me wondering how one element, C6 can be so diverse, so spectacular in its own nature.

Black as coal and clear as light itself. This duplicity and the elements duality embodies the magic of the elemental cornerstone, C6 of the living world. For me C6 represent the strenght and the beauty of life.

### **C6 Princess**

Ring in carbon  
with princess cut  
diamond (0,17ct).

## **Pure Carbon Atoms**

Graphite and diamonds are two allotropes of carbon, pure forms of the same element that differ in structure.

Carbon fiber is composed of carbon atoms and processed into extremely thin fibers. Several thousand carbon fibers form a yarn, which may be used by itself or woven into a fabric.

The properties of carbon fiber, such as high tensile strength, low weight, and low thermal expansion,

makes it attractive in aerospace, civil engineering, sports and in yachting.

Diamonds are the only gem composed of a single element. Diamonds are a crystallization of carbon atoms formed under a unique coincidence of circumstances. They are formed deep within the earth, 140 - 190 miles beneath the surface.

Most recent deposits may be as much as 45 million years old.

### **C6 Supernova**

Ring in carbon with 16 diamonds, white and colors as applegreen, oceanblue, cognac and canary (0,40 ct).

### **C6 Triplet**

Ring in carbon with three white diamonds (0,15 ct).

## **Quality & Confidence**

C6 takes great care in its selection of carbon fiber and gems, working with only the finest materials available.

All diamonds are certified by one of Scandinavians finest gem setters. This quality is an assurance that

your investment is authentic and timeless. All rings are presented with a certificate.

My designs strive to reflect the elemental nature and beauty of their materials.

The entire C6 selection can be viewed online at
